

Sealing on Wheels

Perhaps you already know our Top Sealing Machines. Excellent, manually controlled machines that enable you to seal plastic and aluminum dishes using heat-resistant foil. One of their advantages is that you can move them; you are not bound to one single spot. However, you will need a stable work top, on which the machine can rest. We have found a solution for it!

Ergonomic

As many have requested, MetalPack has developed a mobile working table. The trolley easily adjusts to changing circumstances. It can be adjusted in height from 71 to 91 cm. Moreover, it is on castors, two of which can be locked by a brake. Easy to move, always at the correct height; hence ergonomically sensible.

Smart Trolley

Special for our Top Sealing Machines

Unbreakable construction

The trolley is specially designed for the MetalPack Top Sealing Machines, but it can be easily used in other ways as well, of course. It is a mobile table of indestructible stainless steel with two detachable side tables. It is very stable on its feet and easy to clean.

Narrow, narrower, narrowest

You may use the trolley with two side-tables. This will create space for non-covered dishes at one side and foil-sealed dishes at the other side, for example. The side-tables are removable, you can also put one or even no side-table. Thus, your trolley will fit even in the narrowest work places. And in that case you will still benefit from the convenient bottom plate.

Technical specifications

Dimensions (bxd): **without side-tables** 45x53 cm
with one side-table 80x53 cm
with two side-tables 115x53 cm

Height: **adjustable to 5 positions: 71, 76, 81, 86 and 91 cm**
the side-tables are always 7 cm higher than the worktop
